PREM P S TOMAR

Principal Solutions Architect | Senior Backend Engineer | Java, Cloud & Distributed Systems
Phone: +91 9606379003 | Email: prem.tomar.blr@gmail.com | Pune, India

PROFESSIONAL SUMMARY

Senior individual contributor with 14+ years of experience building Java/Spring Boot services, distributed platforms, and cloud-native backend systems across fintech, media, commerce, logistics, and regulated enterprise domains. Owns architecture, hands-on implementation, production reliability, performance tuning, observability, root cause analysis (RCA), secure operations, and platform modernization for systems serving 7M+ daily users. Strong working depth in Java, Go, Rust, AWS, Kubernetes, REST/event-driven architecture, data pipelines, CI/CD, mentoring, and selective AI-assisted engineering under strict review.

CORE EXPERTISE

Backend & Languages: Java 8+, Spring Boot, OOP, concurrency, data structures, algorithms, Go / GoLang, Rust, Node.js, TypeScript
Systems Design: Microservices, distributed systems, REST contracts, event-driven design, fault tolerance, caching, load balancing, backward compatibility
Cloud & Delivery: AWS, Kubernetes, Docker, Terraform, CI/CD, Git workflows, automated testing, private networking, DevOps/SRE collaboration
Databases & Data: PostgreSQL, MySQL, Aurora, MongoDB, Redis/Valkey, schema design, ORM patterns, data integrity, high-volume processing
Production Engineering: Profiling, CPU/memory tuning, latency and throughput optimization, observability, incident RCA, long-term reliability fixes
Leadership: Architecture reviews, code reviews, release planning, shared platform standards, mentoring junior and mid-level engineers
Security & Compliance: PCI/SOC2-aligned workflows, secure API/service boundaries, privacy-aware data handling, regulated enterprise delivery
AI-assisted Engineering: Focused refactoring, unit-test scaffolding, static-analysis triage, documentation, performance investigation, strict human review

PROFESSIONAL EXPERIENCE

Principal Solutions Architect - SwissClear Services Global Pvt. Ltd. (TAPPP) *(Feb 2024 - Present)*

Environment: Java, Spring Boot, Go / GoLang, Rust, Node.js, AWS, Kubernetes, Aurora, AppSync, Valkey, Redis, microservices, event-driven services, REST APIs, observability, PCI/SOC2

- Architected backend platforms serving 7M+ daily users across media, sports, fintech, betting, and engagement products, with availability, scale, and secure operations built into core design decisions.
- Delivered platform capabilities for enterprise client ecosystems including FIFA, DTV, Globo, BetPlay, Blackhawk Network, LiveLike, Adyen, Adidas, Kraken, and Roku.
- Reduced API latency and improved throughput through Java-to-Go modernization, network redesign, asynchronous processing, private AWS paths, and adoption of Aurora, AppSync, and Valkey.
- Designed the Runtime and Micro-App platform for plug-and-play modules, faster client onboarding, adaptive UI flows, and low-change delivery of client-specific components.
- Built Rust workers to process millions of event and insight payloads, normalize analytics-ready data, and dispatch it reliably into big-data pipelines.
- Defined REST contracts, event interfaces, service boundaries, and backward-compatible patterns for high-throughput transaction and partner workloads.
- Led profiling, release planning, production diagnosis, root cause analysis, and reliability follow-through across backend, platform, and DevOps workstreams.
- Promoted selective AI-assisted workflows for refactoring, unit-test scaffolding, static-analysis triage, documentation, and performance investigation while validating each change through review, tests, and profiling.

Engineering Mentor & Senior Software Engineer - Link to Any *(May 2023 - Feb 2024)*

Environment: Java, Go / GoLang, Node.js, Fastify, Nest.js, MongoDB, MySQL, AWS, CI/CD, REST integrations, observability

- Built backend services and internal tools for migrations, partner integrations, QA traceability, operations, and observability across high-volume data workflows.
- Delivered REST integration services for GoDaddy, Shopify, Clover, Square, Promenade, and LightSpeed with strict data integrity and backward-compatible contracts.
- Moved selected Java/Node.js workloads to Go-based services to reduce overhead and improve CPU, memory, and concurrency control.
- Improved system efficiency by 39% through profiling, bottleneck analysis, targeted rewrites, Fastify/Nest.js migration, and deployment tuning.
- Reduced production issues by 62% using QA automation, traceability, structured logs, dashboards, and durable fixes after root cause analysis (RCA).
- Strengthened CI/CD governance, Git workflows, test discipline, and team productivity through design and implementation reviews.

Software Development Lead - MavQ *(Aug 2021 - May 2023)*

Environment: Java, Go / GoLang, Node.js, AWS, AWS Connect, API-first architecture, workflow automation, database abstractions, CI/CD

- Led development of a no-code automation platform with API-first services, reusable abstractions, and scalable workflow execution.
- Owned modules from design through production support, covering service design, data modeling, testing strategy, automation, CI/CD, and operational handover.
- Created reusable database and platform capabilities, reducing service rollout time by 34% and improving consistency across teams.
- Delivered Customer Experience Center using AWS Connect and contributed to Intelligent Document Processing automation systems.
- Mentored engineers on API design, coding practices, testing, automation, and production readiness while partnering with product, QA, DevOps, and stakeholders.

Platform Lead / Senior Software Engineer - Swift *(Mar 2018 - Aug 2021)*

Environment: Java, Go / GoLang, Rust, Node.js, Angular, AWS, MySQL, MongoDB, REST APIs, checkout, payments, integrations, SenseEngine, ML data processing

- Built e-commerce platform capabilities covering Checkout, Payments, Integrations, SenseEngine, courier orchestration, merchant workflows, and shipment intelligence.
- Designed service and REST boundaries across checkout, payment, logistics, merchant, courier, and partner systems with emphasis on resiliency, data integrity, compatibility, and supportability.
- Migrated selected Java commerce, logistics, and payment components to Go-based services for performance gains, lower overhead, and better concurrency control.
- Used Rust for high-volume shipment data pipelines feeding ML models, improving throughput and control over logistics datasets.
- Implemented payment and checkout workflows across merchant, logistics, and partner systems, including reconciliation and integration flows.
- Created SenseEngine, reducing shipment cost by 40% across 300K+ monthly orders through ML-driven shipment intelligence.
- Built BYOC courier and BYOP payment orchestration platforms, plus address validation to improve nationwide deliverability.

Early Career - Software Engineering & Consulting (2010 - Feb 2018)

Software Developer - Aadi Infotech Pvt. Ltd., Gwalior (Feb 2010 - Nov 2014)

Environment: Java, MySQL, Apache, Linux, .NET/C#, Android/iOS, OOP, database-backed applications, client delivery

- Built and supported transportation, education, MLM, image-editing/social, mobile, and internal-tool products while progressing from implementation support into full software development ownership.
- Redesigned standalone applications into distributed/thin-client Java systems, applying OOP, MySQL-backed workflows, Linux/Apache deployments, and structured issue resolution for domestic and international clients.

Full-Stack / Mobile Developer - Freelance Consulting Engagements (Dec 2014 - Feb 2018)

Engagements: Millennial Group Inc. (Amsterdam), Cloud Digital Arts (Maputo), Cargo 3 IVS / FindACargo (Denmark), independent consulting

Environment: Android, iOS, .NET MVC, Entity Framework, C#, MySQL, server operations, marketplace systems, mobile delivery

- Delivered mobile, backend, database, and marketplace capabilities for international clients, covering requirements analysis, API/service implementation, production support, and release coordination.
- Built Android/iOS applications, P2P/server components, .NET MVC marketplace features, and operational workflows while coordinating design, database, backend, and delivery activities end to end.

EDUCATION & ADDITIONAL INFORMATION

Education: PG Program in Data Science and AI/ML - Great Learning | B.E. Information Technology - RGPV

Strengths: Java/Spring Boot Backend Engineering, Distributed Systems, Microservices, Performance Engineering, ML Product Engineering, Team Mentoring, Production Reliability

AI Practice: Comfortable using AI tools for small, reviewable diff-set generation, refactoring analysis, unit-test scaffolding, and performance investigation; retains ownership through code review, tests, profiling, and production safeguards.
